

SENSICE

Cool touch

BEKAERT DESLEE

Live. Love. Sleep. Be Happy.

Innovative cool-to-touch technology!

IMPORTANCE OF COOLING DOWN

Temperature plays a key part in the process of falling asleep. Our body needs to drop in temperature before we can start to doze off. So in order to quickly fall asleep, we need to find that temperature 'sweet spot'. SensICE does just that!

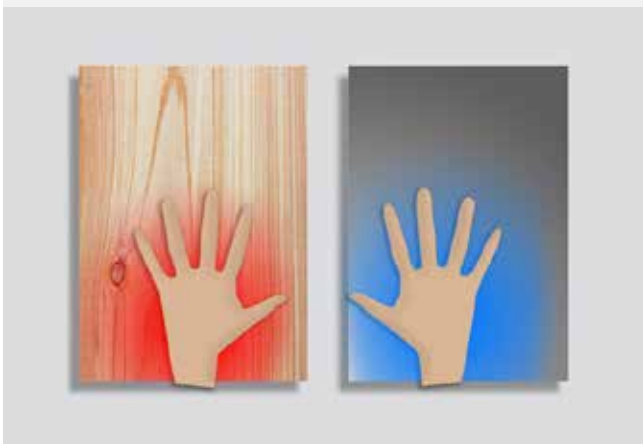

COOL-TO-TOUCH TECHNOLOGY

The SensICE mattress does not simply cool you down, it is cool-to-touch and provides an instant cooling effect on the skin. You will fall asleep more quickly, enjoying a qualitative night's rest.

CONDUCTIVITY

Have you ever noticed how much colder water, glass or metal feels compared with the wooden table or the carpet in the same room? Isn't that weird? They all have the same (room) temperature, don't they? It has to do with the ability of materials to conduct heat; some materials are better at it than others, giving them a cooler touch. SensICE mattress textiles are hyper-conductive, they take heat away instantly, resulting in a comfortably cool effect.

On top of that, the stunning cool-to-touch mattress will instantly convince mattress shoppers!

SensICE mattress textiles are hyper-conductive. They instantly take the heat away from your body resulting in a comfortable cool effect.

Experience an amazing cool touch
